

Термоконтролер с LCD дисплей

NEW

Характеристики:

Голям LCD дисплей с бели знаци лесни за разчитане.

LDC дисплея е с големина 15,3мм и предлага видимост при различна среда.

Светла среда

Тъмна среда

Дисплея лесно може да се гледа от различни ъгли.

• Компактен дизайн с дължина 45мм

Намалената дължина спомага за улесняване на монтажа. Дължината е намалена 30% спрямо стандартните размери на други термоконтролери

- 11те сегмента на дисплея позволяват за по добра четимост.

Дисплей с 7 сегмента

Дисплей на TX4S

- 50ms Бъзоскоростно опресняване на екрана
- 50ms опресняване позволява за точен и бърз температурен контрол.

- Промяна на изход токов или SSR
Операторите могат да избират между токов изход или SSR изход.

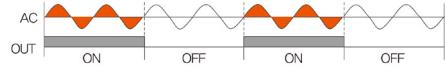

● Изход за SSR устройство опции за контрол

Операторите могат да избират между ON/OFF, цикличен и фазов контрол използвайки стандартните SSR опции на изхода. Това позволява прецизен и точен контрол с малка консумация.

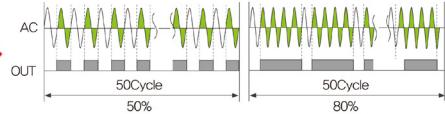

Метод чрез SSR изход

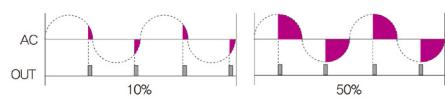

► ON/OFF контрол

► Цикличен контрол

► Фазов контрол

■ Приложения

Точен температурен контрол при например машини за печене на кафе.

TX4S Series

LCD Дисплей и PID контрол

NEW

■ Характеристики

- Бързоскоростно обработване на информация(50ms)
- Подобрена видимост посредством LCD дисплей
- Поддръжка на комуникационна функция през RS485(Modbus RTU)
- Удобни настройки на параметрите(RS485 комуникация)
Безплатен достъп до изчертателна и подробна програма
за устройството (DAQ master)
- SSR изход/Токов изход с опция за избиране
- SSRP изход(стандартен/фазов/цикличен с избирателен контрол)
- Компактен дизайн
Намалена дължина с 30% спрямо другите видове термоконтролери

※ Термо подложката се продава отделно

Please read "Caution for your safety" in operation manual before using.

■ Цялостна програма за управление на устройството

- DAQmaster е цялостна програма за управление. Използва се за настройка на параметри и мониторинг.
- За повече информация посетете www.autonics.com за да изтеглите програмата и наръчника за нея.

< Компютърни спецификации >

----	------------------------------------

Спецификации

Series	TX4S	
Захранване	100-240VAC 50/60Hz	
Допустим волтаж	90 to 110% of rated voltage	
Консумация	Max. 8VA	
Дисплей	11 сегментен метод (PV:White.SV:green) Другия дисплей (жълт) с LCD метод	
Големина на знаците	PV(W×H)	6.9×15.3mm
	SV(W×H)	4.1×9.2mm
Видове Входове	RTD	DPT100Ω, Cu50Ω (permissible line resistance max. 5Ω)
	TC	K(CA), J(IC), L(IC), T(CC), R(PR), S(PR)
Точност на дисплея	RTD	•При стайна температура(23C ±5C) •Външна температура(PV+- 0.5C или +2C)
	TC	
Контролен Изход	Реле	250VAC 3A 1a
	SSR	Max. 12VDC ± 2V 20mA
	Токов	DC4-20mA or DC0-20mA (load resistance max. 500Ω)
Други Изходи	Алармен,изход	AL1, AL2 Relay: 250VAC 3A 1a
	Транс., Изход	DC4-20mA (load resistance max. 500Ω, output accuracy: ±0.3%F.S.)
	Ком. Изход	RS485 Communication output (Modbus RTU method)
Метод на контрол	ON/OFF control, P, PI, PD, PID control	
Хистерезис	1 до 100C/F (0.1 до 50.0 C/F) вариращ	
Пропорции	0.1 до 999.9 C/F	
Време	0 to 9999 sec.	
Производно време (D)	0 to 9999 sec.	
Контролен период (T)	0.5 to 120.0 sec.	
Ръчен рестарт	0.0 to 100.0%	
Период на отчитане	50ms	
Диелектрична сила	3,000VAC 50/60Hz for 1 min. (between all terminals and case)	
Вибрация	0.75mm амплитуда честота 5 to 55Hz(за 1 мин) в всеки X,Y,Z посока за 2 часа	
Релеен живот	Механичен	OUT, AL1/2: Min. 5,000,000 операции
	Електричен	OUT, AL1/2: Min. 200,000 (250VAC 3A resistance load)
Изолац. съпротивление	Min. 100MΩ (at 500VDC megger)	
Съпротивление на шума	(pulse width 1μs) ±2kV R-phase, S-phase	
Съхранение на памет	Приблизително 10 години	
Работна среда	Температура	-10 to 50°C, storage: -20 to 60°C
	Влажност	35 to 85%RH, storage: 35 to 85%RH
Ниво на защита	IP50 (front panel, IEC standards)	
Вид изолация	Double insulation or reinforced insulation(mark: ■, dielectric strength between all terminals and case: 3kV)	
Сертификати	  	
Тегло	132g(с кутия)	

※1: When using the unit at low temperature (below 0°C), display cycle is slow.

Control output operates normally.

※2: ○ At room temperature(23°C±5°C)

- TC R(PR), S(PR), below 200°C: (PV ±0.5% or ±3°C, select the higher one) ±1 digit
, over 200°C: (PV ±0.5% or ±2°C, select the higher one) ±1 digit

- TC L(IC), RTD Cu50Ω: (PV ±0.5% or ±2°C, select the higher one) ±1 digit

○ Out of room temperature range

- TC R(PR), S(PR): (PV ±1.0% or ±5°C, select the higher one) ±1 digit

- TC L(IC), RTD Cu50Ω: (PV ±0.5% or ±3°C, select the higher one) ±1 digit

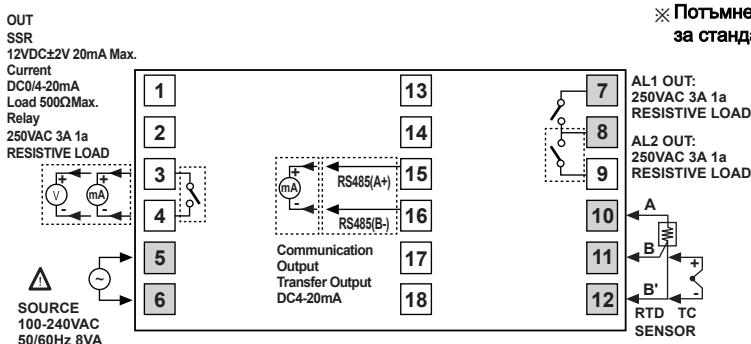

※3: The weight includes packaging. The weight in parentheses is for unit only.

※Environment resistance is rated at no freezing or condensation.

LCD Display PID Control

Unit Description

1. **Measured value (PV) component:**
RUN mode: Displays current measured value (PV).
SETTING mode: Displays parameters.
2. **Setting value (SV) display component:**
RUN mode: Displays setting value(SV).
SETTING mode: Displays setting value of parameter.
3. **Temperature unit(°C/°F) indicator:**
Displays the set temperature unit as temperature unit [UNIT] of parameter group 2.
4. **Control output (OUT1) indicator:**
Turns ON while control output is ON.
※ Turns ON when MV is over 3.0% at cycle/phase control of SSR drive output method.
5. **Alarm output (AL1, AL2) indicator:**
Turns ON when the corresponding alarm output turns ON.
6. **Auto-tuning indicator:**
Flashes during auto-tuning every 1 sec.

7. **[MODE] key:** Enters parameter group, returns to RUN mode, moves parameters, and saves the setting value.

8. **Setting value adjustment key:** Enters SV setting mode and move digits.

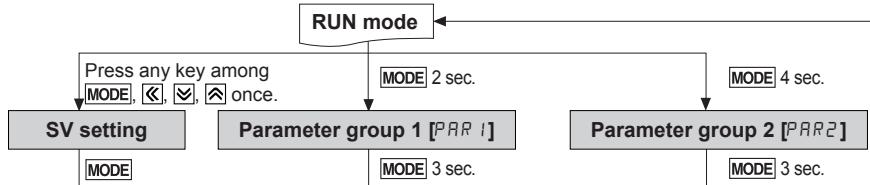

9. **Digital input key:**

Press the **[I]+[O]** keys for 3 sec. to execute the digital input key functions which is set at digital input key [$d^1 - d^4$] of parameter group 2 (RUN/STOP, clear alarm output, auto-tuning).

10. **PC loader port:**

It is for serial communication to set parameter and monitoring by DAQMaster installed in PC. Use this for connection EXT-US (converter cable, sold separately) + SCM-US (USB to Serial converter, sold separately).

Parameter Group

※ Order of parameter setup **Parameter group 2** → **Parameter group 1** → **SV setting**

• All parameters are related one another. Set the parameters as above order.

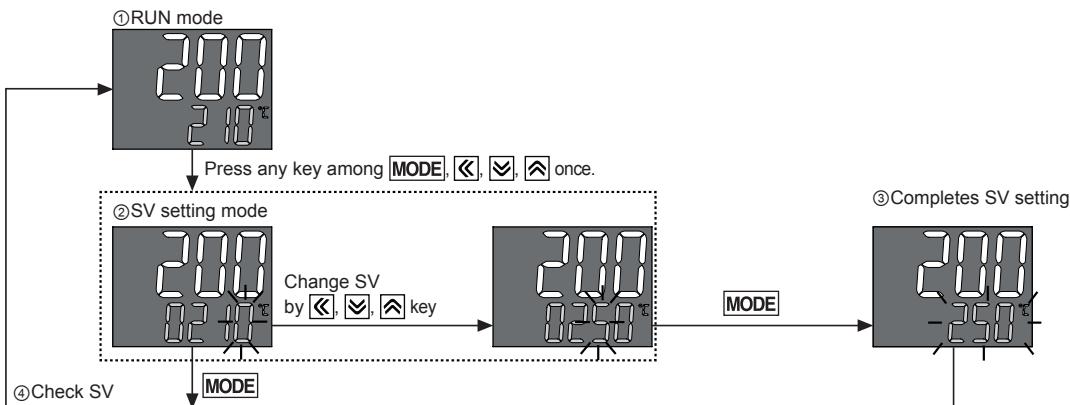

※ If there is no key input for 30 sec. while setting SV or the parameters, the new settings are ignored, and the unit will return to RUN mode with previous settings.

※ When returning to RUN mode by holding the **[MODE]** key for over 3 sec., press the **[MODE]** key within 1 sec. to re-enter the first parameter of previous parameter group.

※ Hold the **[<-]+[>]+[MODE]** keys for 5 sec. in RUN mode, to enter re-set parameter menu. Select 'E5' and all parameters are reset as factory default.

• SV setting

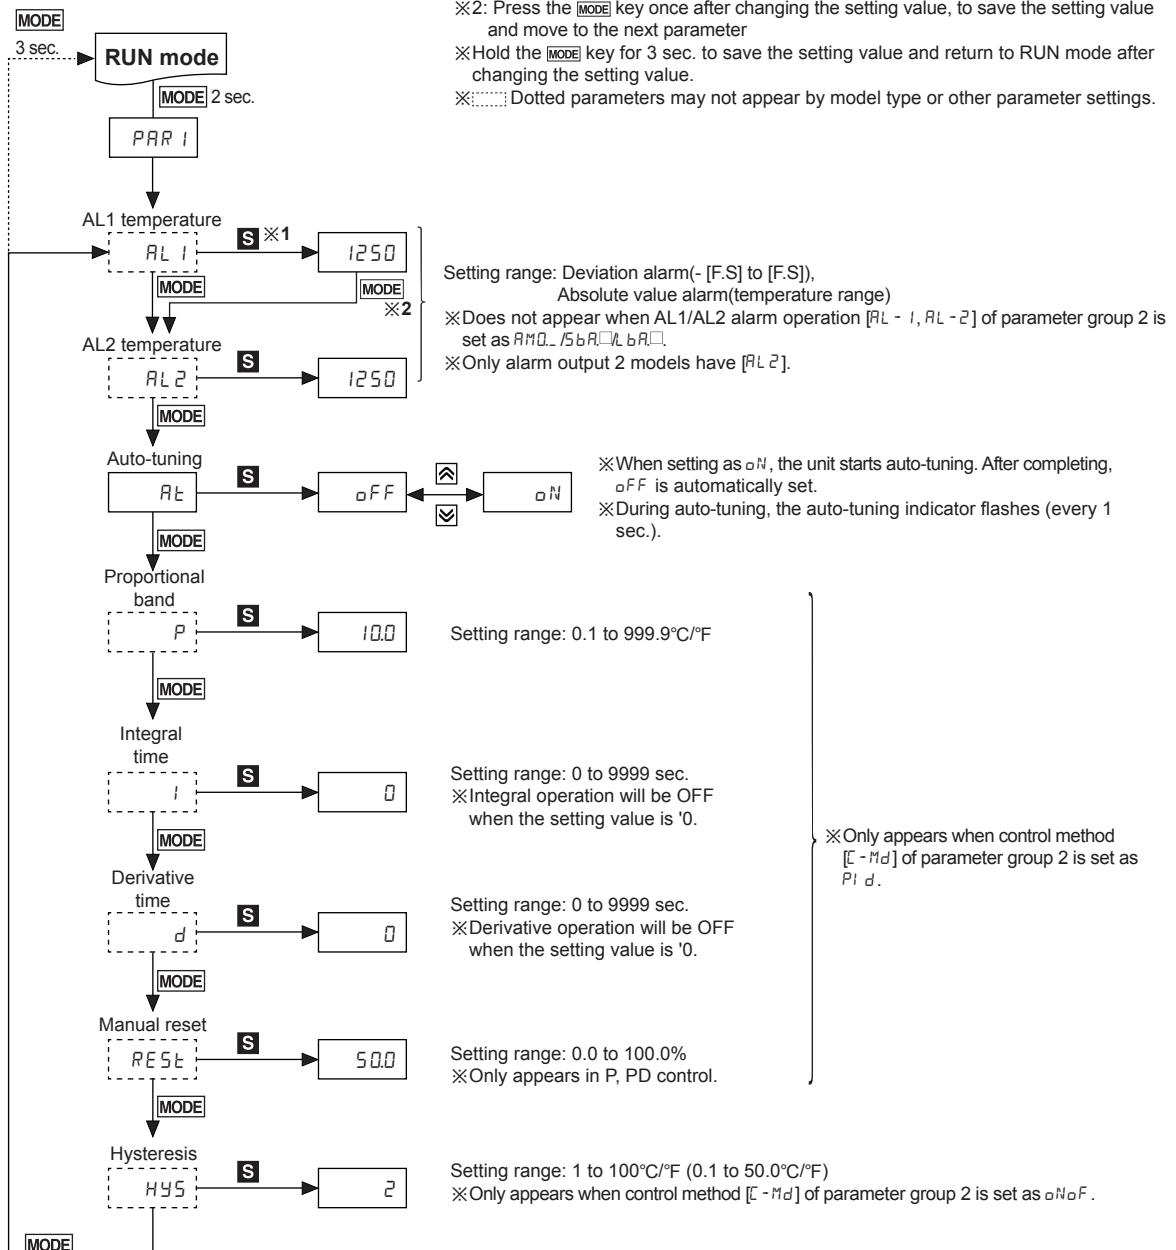

※ To change set temperature from 210°C to 250°C

■ Error

Display	Description	Troubleshooting
OPEN	Flashes when input sensor is disconnected or sensor is not connected.	Check input sensor status.
HHHH	Flashes when measured value is higher than input range.	When input is within the rated input range, this display disappears.
LLLL	Flashes when measured value is lower than input range.	

TX4S Series

■ Alarm

Set both alarm operation and alarm option by combining.
Each alarm operates individually in two alarm output models.
When the current temperature is out of alarm range, alarm clears automatically.
If alarm option is alarm latch or alarm latch and standby sequence 1/2, press digital input key [$\text{M} + \text{A}$ 3 sec.], digital input key [$\text{dI} - \text{k}$] of parameter group 2 set as RLRE), or turn OFF the power and turn ON to clear alarm.

◎ Alarm operation

Mode	Name	Alarm operation		Description
RMD_-	-	-		No alarm output
$\text{RM1}\square$	Deviation high-limit alarm	OFF High-limit deviation: Set as 10°C	OFF High-limit deviation: Set as -10°C	If deviation between PV and SV as high-limit is higher than set value of deviation temperature, the alarm output will be ON.
$\text{RM2}\square$	Deviation low-limit alarm	ON Low-limit deviation: Set as 10°C	ON Low-limit deviation: Set as -10°C	If deviation between PV and SV as low-limit is higher than set value of deviation temperature, the alarm output will be ON.
$\text{RM3}\square$	Deviation high/low-limit alarm	ON High, Low-limit deviation: Set as 10°C	OFF High, Low-limit deviation: Set as 10°C	If deviation between PV and SV as high/low-limit is higher than set value of deviation temperature, the alarm output will be ON.
$\text{RM4}\square$	Deviation high/low-limit reserve alarm	OFF High, Low-limit deviation: Set as 10°C	ON High, Low-limit deviation: Set as 10°C	If deviation between PV and SV as high/low-limit is higher than set value of deviation temperature, the alarm output will be OFF.
$\text{RM5}\square$	Absolute value high limit alarm	OFF Alarm absolute-value: Set as 90°C	OFF Alarm absolute-value: Set as 110°C	If PV is higher than the absolute value, the output will be ON.
$\text{RM6}\square$	Absolute value low limit alarm	ON Alarm absolute-value: Set as 90°C	ON Alarm absolute-value: Set as 110°C	If PV is lower than the absolute value, the output will be ON.
$\text{SbR}\square$	Sensor break alarm	-	-	It will be ON when it detects sensor disconnection.
$\text{LbR}\square$	Loop break alarm	-	-	It will be ON when it detects loop break.

※ H: Alarm output hysteresis [RHYS]

◎ Alarm option

Option	Name	Description
$\text{RM}\square.\text{a}$	Standard alarm	If it is an alarm condition, alarm output is ON. If it is a clear alarm condition, alarm output is OFF.
$\text{RM}\square.\text{b}$	Alarm latch	If it is an alarm condition, alarm output is ON and maintains ON status. (Alarm output HOLD)
$\text{RM}\square.\text{c}$	Standby sequence 1	First alarm condition is ignored and from second alarm condition, standard alarm operates. When power is supplied and it is an alarm condition, this first alarm condition is ignored and from the second alarm condition, standard alarm operates.
$\text{RM}\square.\text{d}$	Alarm latch and standby sequence 1	If it is an alarm condition, it operates both alarm latch and standby sequence. When power is supplied and it is an alarm condition, this first alarm condition is ignored and from the second alarm condition, alarm latch operates.
$\text{RM}\square.\text{e}$	Standby sequence 2	First alarm condition is ignored and from second alarm condition, standard alarm operates. When re-applied standby sequence and if it is alarm condition, alarm output does not turn ON. After clearing alarm condition, standard alarm operates.
$\text{RM}\square.\text{f}$	Alarm latch and standby sequence 2	Basic operation is same as alarm latch and standby sequence1. It operates not only by power ON/OFF, but also alarm setting value, or alarm option changing. When re-applied standby sequence and if it is alarm condition, alarm output does not turn ON. After clearing alarm condition, alarm latch operates.

※ Condition of re-applied standby sequence for standby sequence 1, alarm latch and standby sequence 1: Power ON

Condition of re-applied standby sequence for standby sequence 2, alarm latch and standby sequence 2: Power ON, changing set temperature, alarm temperature [$\text{RL 1}, \text{RL 2}$] or alarm operation [$\text{RL - 1}, \text{RL - 2}$], switching STOP mode to RUN mode.

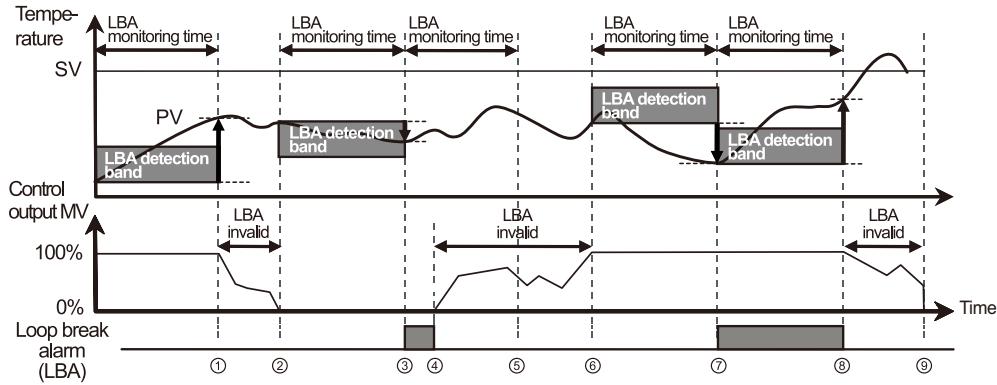

LCD Display PID Control

•Sensor break alarm

The function that alarm output will be ON when sensor is not connected or when sensor's disconnection is detected during temperature controlling. You can check whether the sensor is connected with buzzer or other units using alarm output contact. It is selectable between standard alarm [S_bR_A] or alarm latch [S_bR_b].

•Loop break alarm(LBA)

It checks control loop and outputs alarm by temperature change of the subject. For heating control(cooling control), when control output MV is 100%(0% for cooling control) and PV is not increased over than LBA detection band [L_bR_b] during LBA monitoring time [L_bR_t], or when control output MV is 0%(100% for cooling control) and PV is not decreased below than LBA detection band [L_bR_b] during LBA monitoring time [L_bR_t], alarm output turns ON.

Start control to ①	When control output MV is 100%, PV is increased over than LBA detection band [L _b R _b] during LBA monitoring time [L _b R _t].
① to ②	The status of changing control output MV (LBA monitoring time is reset.)
② to ③	When control output MV is 0% and PV is not decreased below than LBA detection band [L _b R _b] during LBA monitoring time [L _b R _t], loop break alarm (LBA) turns ON after LBA monitoring time.
③ to ④	Control output MV is 0% and loop break alarm (LBA) turns and maintains ON.
④ to ⑥	The status of changing control output MV (LBA monitoring time is reset.)
⑥ to ⑦	When control output MV is 100% and PV is not increased over than LBA detection band [L _b R _b] during LBA monitoring time [L _b R _t], loop break alarm (LBA) turns ON after LBA monitoring time.
⑦ to ⑧	When control output MV is 100% and PV is increased over than LBA detection band [L _b R _b] during LBA monitoring time [L _b R _t], loop break alarm (LBA) turns OFF after LBA monitoring time.
⑧ to ⑨	The status of changing control output MV (LBA monitoring time is reset.)

※When executing auto-tuning, LBA detection band [L_bR_b] and LBA monitoring time are automatically set based on auto tuning value. When alarm operation mode [AL - 1, AL - 2] is set as loop break alarm(LBA) [L_bR_b], LBA detection band [L_bR_b] and LBA monitoring time [L_bR_t] parameter is displayed.

TX4S Series

■ Functions

1. Input correction [$N-b$]

Controller itself does not have errors but there may be error by external input temperature sensor. This function is for correcting this error. E.g.) If actual temperature is 80°C but controller displays 78°C, set input correction value [$N-b$] as '2' and controller displays 80°C.
※As the result of input correction, if current temperature value (PV) is over each temperature range of input sensor, it displays HHHH or LLLL.

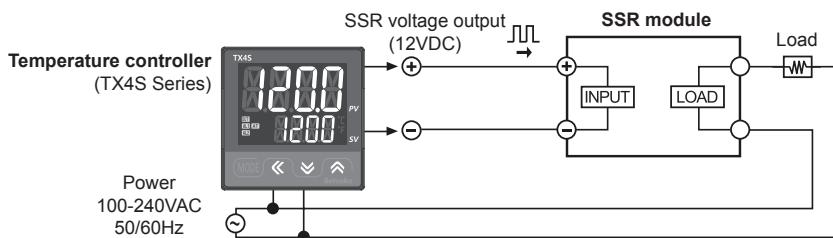

2. Input digital filter [$MAR.F$]

If current temperature (PV) is fluctuating repeatedly by rapid change of input signal, it reflects to MV and stable control is impossible. Therefore, digital filter function stabilizes current temperature value.

For example, set input digital filter value as 0.4 sec, and it applies digital filter to input values during 0.4 sec and displays these values. Current temperature may be different by actual input value.

3. SSR drive output method (SSRP function) [$SSRM$]

- SSRP function is selectable one of standard ON/OFF control, cycle control, phase control by utilizing standard SSR drive output.
- This function parameter appears only in SSR drive output model (TX4S-□4S).
- Realizing high accuracy and cost effective temperature control with both current output (4-20mA) and linear output(cycle control and phase control)
- Select one of standard ON/OFF control [$SEND$], cycle control [$CYC.L$], phase control [$PHAS$] at $SSRM$ parameter of parameter group 2. For cycle control, connect a zero cross turn-on SSR or random turn-on SSR. For phase control, connect random turn-on SSR.

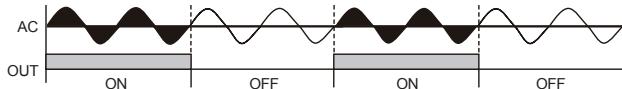

※When selecting cycle or phase control mode, the power supply for a load and a temperature controller must be the same.

※Control cycle [\cdot] is able to set only when control method [$\cdot - Md$] of parameter group 2 is set as $PI.d$ and SSR drive output method [$SSRM$] is set as $SEND$.

※In case of selectable current output or SSR drive output model(TX4S-□4C), this parameter does not appear.
Standard ON/OFF control by SSR is only available.

1) Standard ON/OFF control [$SEND$]

Controls ON (100% output)/OFF (0% output) as same as standard relay output.

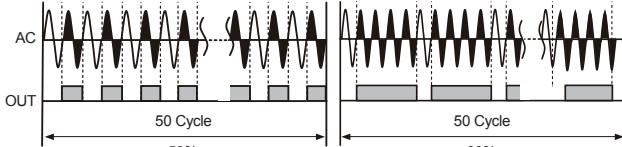

2) Cycle control [$CYC.L$]

Controls the load by repeating output ON / OFF according to the rate of output within setting cycle based on certain period (50-cycle).

Control accuracy is almost the same with phase control's.

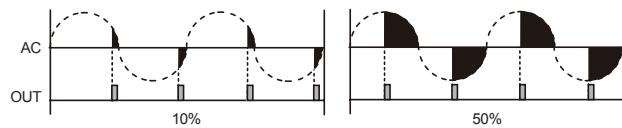

This control has improved ON/OFF noise than phase control's due to zero cross type which turns ON/OFF at zero point of AC.

3) Phase control [$PHAS$]

Controls the load by controlling the phase within AC half cycle. Serial control is available.

Must use random turn-on SSR for this mode.

4. Current output range [$o.MA$]

In case of selectable current output or SSR drive output model(TX4S-□4C), when control output [$o.Ut$] parameter group 2 is set as [$CURR$], you can select high/low-limit range, 4-20mA [$4-20$] or 0-20mA [$0-20$] of current output.

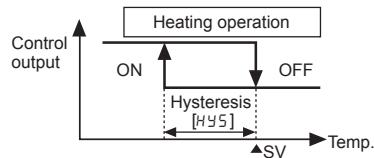

5. Hysteresis [HYS]

Set interval between ON and OFF of control output for ON/OFF control.

• If hysteresis is too narrow, hunting(oscillation, chattering) could occur due to external noise.

• In case of ON / OFF control mode, even if PV reaches stable status, there still occurs hunting. It could be due to hysteresis

[HYS] setting value, load's response characteristics or sensor's location. In order to reduce hunting to a minimum, it is required to take into following factors consideration when designing temp. controlling; proper Hysteresis [HYS], heater's capacity, thermal characteristics, sensor's response and location.

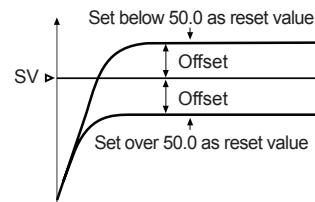

LCD Display PID Control

6. Manual reset [RES]

When selecting P/PD control mode, certain temperature difference exists even after PV reaches stable status because heater's rising and falling time is inconsistent due to thermal characteristics of controlled objects, such as heat capacity, heater capacity. This temperature difference is called offset and manual reset [RES] function is to set/correct offset.

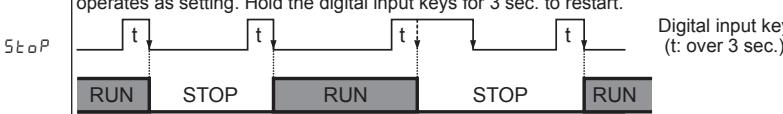

When PV and SV are equal, reset value is 50.0%. After control is stable, PV is lower than SV, reset value is over 50.0% or PV is higher than SV, reset value is below 50.0%.

• Manual reset [RES] by control result

7. Digital input key [] + [] 3 sec.) [di - k]

Parameter	Operation
OFF	<input type="checkbox"/> OFF
RUN/STOP	<input type="checkbox"/> STOP
Clear alarm	<input type="checkbox"/> RL.RE
Auto-tuning	<input type="checkbox"/> RT

8. Control output MV for input break [ER.MV]

When input sensor is break, set control output MV.

When control method [C-Md] of parameter group 2 is set as NOF, set control output MV as 0.0(OFF) or 100.0(ON). When control method [C-Md] is set as PI d, setting range for control output MV is 0.0 to 100.0.

RS485 Communication Output

Applicable for models with RS485 communication output through option output(TX4S-B4).

Please refer to 'Ordering Information'.

Com. protocol	Modbus RTU	Com. speed	2400, 4800, 9600, 19200, 38400 bps
Applied standard	EIA RS485		
Max. connections	31 units(address: 1 to 99)	Start-bit	1-bit fixed
Com. method	2-wire half duplex	Data-bit	8-bit fixed
Synchronization method	Asynchronous	Parity-bit	None, Even, Odd
Com. distance	Within 800m	Stop-bit	1, 2Bit
Com. response time	5 to 99ms		

2. Modbus Mapping Table

2-1. Read Coil Status (Func 01) / Force Single Coil (Func 05) [Func: 01/05, R/W: R/W]

No.(Address)	Type	Description	Setting/Display range	Unit	Default
000001(0000)	RUN/STOP	Control output run/stop	0: RUN 1: S t o P	-	S t o P
000002(0001)	AT	Auto-tuning run/stop	0: OFF 1: ON	-	OFF
000003(0003)	Alarm Reset	Alarm output clear	0: OFF 1: ON	-	OFF
000004 to 000050	Reserved				

2-2. Read Discrete Inputs(Func 02) [Func: 02, R/W: R]

No.(Address)	Type	Description	Setting/Display range	Unit	Default
100001(0000)	°C indicator	Unit indicator	0: OFF 1: ON	-	-
100002(0001)	°F indicator	Unit indicator	0: OFF 1: ON	-	-
100003(0002)	OUT indicator	Control output indicator	0: OFF 1: ON	-	-
100004(0003)	AT indicator	Auto-tuning indicator	0: OFF 1: ON	-	-
100005(0004)	AL1 indicator	Alarm output 1 indicator	0: OFF 1: ON	-	-
100006(0005)	AL2 indicator	Alarm output 2 indicator	0: OFF 1: ON	-	-
100006 to 100050	Reserved

■ Proper Usage

1. Please separate the unit wiring from high voltage lines or power lines to prevent inductive noise.
2. For crimp terminal, select following shaped terminal (M3).

3. Install a power switch or circuit breaker to control the power supply.
4. The power switch or circuit breaker should be installed where it is easily accessible by the user.
5. The unit is for temperature controller. Do not use the unit as volt-meter or ampere-meter.
6. When using RTD temperature sensor, must wire it as 3-wire type. If cable is extended, use 3 wires which are same thickness as the line. It might cause the deviation of temperature when line resistance is different.
7. If power line and input signal line are close each other, install line filter for noise protection at power line and use shielded input signal line.
8. Keep away from the high frequency instruments.(High frequency welding machine & sewing machine, large capacity SCR controller).
9. When supplying the measured input, the unit displays HHHH or LLLL, the measured input may have problem. Turn OFF the power to the unit and check the line..
10. This unit may be used in the following environments.
 - ①It shall be used indoor.
 - ②Altitude up to 2,000m.
 - ③Pollution degree 2.
 - ④Installation category II.
