

Greasing Oiling Lubricating

Copper Spray

WIKO Copper spray is used for a durable assembly lubrication of screw joints and plug connections that are exposed to high temperatures and corrosive influences during operation.

Trading units

400 ml can

Item no.:

AKUS.D400

Application Areas

- Protective coating for the interior and exterior
- Fittings of pipes, flanges and armatures that are part of superheated steam conductors
- Fittings of exhaust pipes and combustors
- Fastening screws of gas and oil burners
- Lasting lubrication for component parts with a lengthwise, rotating or oscillating movement

Characteristics

- Provides an optimal ratio of screw-down torque to initial tension of the screw and enables a non-destructive disassembly
- Applied substance prevents galling, burning-in, and seizing due to high temperature, long service life, corrosive environment and moisture
- Temperature range: - 30°C to + 1100°C
