Small Size, Dual LCD Display Digital Pressure Sensor ■ Features

- Pressure measurement of any gas, liquid or oil [Fluid type]
 (xexcept substances which may corrode stainless steel 316L)
- Simultaneous display of present value (PV) and set value (SV)
 ※Selectable SV, pressure unit, or none display for SV display part
- Selectable NPN, PNP open collector output by parameter setting
- 3 colors for PV display part (run mode: red or green / setting mode: orange)
- 12-segment LCD display for easier value reading
- Measurement range: -100.0 to 100.0kPa, -100 to 1,000kPa (pneumatic type: compound pressure, fluid type: sealed gauge pressure)
- Analog output: voltage (1-5VDC), current (DC4-20mA)
- Parameter copy function
- Option input/output: auto shift, remote zero, hold (only for PSQ-□C□□U-□)
- Forced output control mode for device testing and maintenance
- Min. display unit: 0.1kPa, 1kPa (variable by model)
- One-touch connector type for easy wiring and maintenance
- Password setting for SV

XFor using mmH₂O unit, multiply display value by 100.

^{※2:} In hysteresis output mode, it is variable.

X3: Select one between analog output (voltage or current) and external input.

X4: The weight includes packaging. The weight in parenthesis is for unit only.

[※]For using mmH₂O unit, multiply display value by 100.

XEnvironment resistance is rated at no freezing or condensation

Unit Description

1. Present value (PV) display part (green, red, orange by setting/status)

RUN mode: Displays PV.

Setting mode: Displays parameter.

2. Setting value (SV) display part (green)

RUN mode: Displays setting value, unit, etc. Setting mode: Displays SV.

3. Output indicator (OUT1, OUT2) (orange): Turns ON while the control output turns ON. 4. M key

RUN mode: Press the M key for over 2 sec to enter parameter 1 group.

Press the M key for over 4 sec to enter parameter 2 group.

Setting mode: Press the M key to select the setting items. Press the M key for over 2 sec to return RUN mode.

5. 🗟, 🗟 key

RUN mode: Press the , key to set preset value of output operation mode.

Press the M+⊠ keys to set key lock/unlock.
Press the ⊠+⊠ keys to adjust zero point.

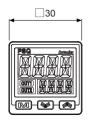

Press the M+ keys to set peak hold. Preset value setting mode: Press the ⊌, key to increase/decrease setting value.

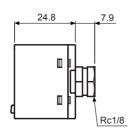

Setting mode: Changes the parameter.

Setting for Each Mode

■ Zero-point Adjustment

- ※If executing zero-point adjutment when external pressure over ±5% of rated pressure applied, ERR I flashes five times during pressing the keys. Remove external pressure and execute zero point again.
- 1. To set zero atmospheric pressure forcibly, press the 🗵 + 🧟 keys over 1 sec in RUN mode with the opened pressure port.
- 2. Zero point adjustment is completed, the PV display part displays [].[] .
- XPlease execute zero-point adjustment regularly.

■ Parameter Setting

※After entering parameter 1/2 group, if there is no additional key input during 60 sec, it maintains previous setting value and it returns to RUN mode.

 ※Press the ☑, ❷ key to set the setting value.

*After entering parameter 1/2 group, press the M key for over 2 sec to return to RUN mode.

※When pressing the

M key once returning RUN mode from parameter 1/2 group within 2 sec, it enters the previous parameter group.

≤ Max. display pressure

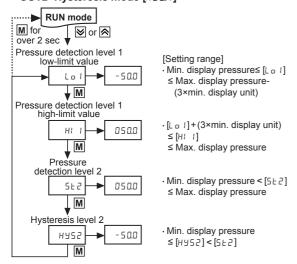

M

X Setting items and setting value are displayed at the setting value (SV) display part alternatively.

^{*}When changing output operation mode, the preset value is reset for the changed output operation mode. However, if the changed output operation mode has the previous preset value, the previous value is set.

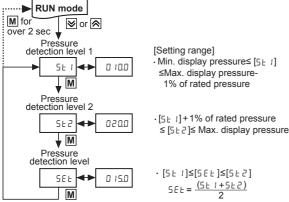

Preset Setting

OUT1=Window comparison output mode [⋈ ! N],
 OUT2=Hysteresis mode [H 9 5.M]

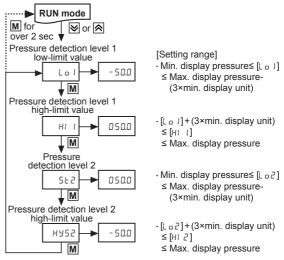

OUT1=Auto sensitivity setting mode [AUE □],
 OUT2=Auto sensitivity setting mode [AUE □]

 \times Press the \land key to set 5£ 1, 5£2 during applying 5£ 1, 5£2 pressure. \times The set 5££ value is adjustable by pressing the \checkmark 1, \land 2 keys.

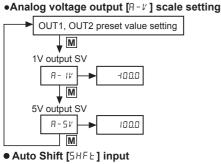

● OUT1=Window comparison output mode [겓 N], OUT2=Window comparison output mode [겓 N]

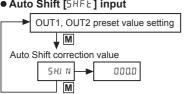

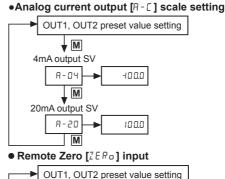

● OUT1=Forced output control mode [F.a UE], OUT2=Forced output control mode [F.a UE]

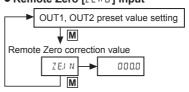

When using forced output control mode, auto shift/remote zero/ hold input functions are not available.

O NPN or PNP open collector output+analog output or external input type

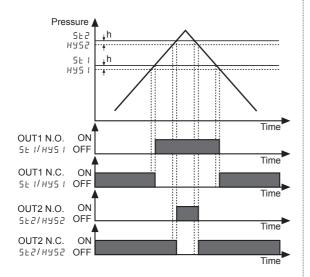

**Analog output (voltage or current) and external input (auto shift/remote zero/hold) are not available at the same time.

Output Operation Mode

XPSQ Series has 4 output operation mode. Use the proper operation mode in accordance with the desired application of detection.

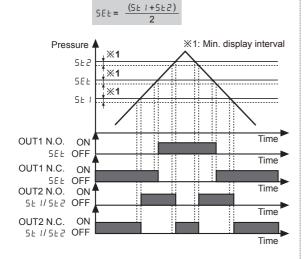

© Hysteresis mode [H 95.M]

- · Set the hysteresis of pressure detection.
- Set the pressure detection level [5£ 1,5£2] and hysteresis [HY5 1, HY52].

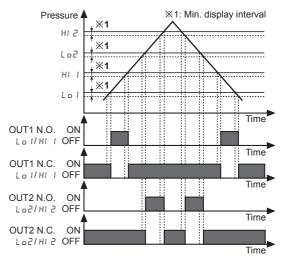

© Auto sensitivity setting mode [AUto]

- · It sets the proper detection sensitivity automatically.
- · It sets by the two pressure points [5£ 1, 5£2].
- · Hysteresis is fixed as Min. display interval.
- The pressure detection level [5EE] is shown in the below formula.

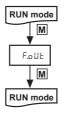

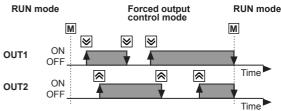

- · It detects pressure at the desired range.
- Set high-limit value of pressure detection level [HI 1, HI 2], and low-limit value of pressure detection level [L 0 1, L 0 2].
- · Hysteresis is fixed as Min. display interval.

© Forced output control mode [F.□ U Ł]

- Regardless of setting value, it maintains comparison output OFF and displays present pressure.
- Set OUT1 operation mode [all l] of parameter 1 group as [F.all l] and return to RUN mode. The PV display part displays the measured pressure and the SV display part displays [F.all l].
- During forced output control mode, press the ☑ or ☒ key to turn ON/OFF OUT1, 2 manually.

Functions

O Parameter copy

**This function is for copying parameter settings of Master to Slave 1:1. Master and Slave should be the same specification model.

%1: oN: Copies SVs.,

 ${\scriptstyle \square\, N\, -\, L}$: Copies SVs and locks front keys of Slave unit.

※2: When connecting Master unit and Slave unit incorrectly, the PV display of Master unit displays ERR식.

Turn OFF the Master unit power and turn ON it. It displays RE d 의 at SV display part.

- ※3: The PV display part of Master displays as orange color. The PV display part of Slave displays as green color. When completing copy, the PV display part of Master and Slave displays the same arbitrary value.
- X4: Connect other Slave units to copy parameters.

Analog output scale adjustment

Xonly for NPN or PNP open collector output+ analog output or external input type

Set output voltage, output current to the current display value at 1-5VDC voltage output [R - V], DC4-20mA [R - E] current output.

- Set pressure value for 1VDC output [R IV] and pressure value for 5VDC output [R 5V]. [R IV] setting range: 0% F.S. \leq $[R IV] \leq 100\%$ F.S. $[R 5V] \leq [R IV] = 100\%$ F.S. or [R IV] + 10% F.S. \leq $[R 5V] \leq 100\%$ F.S.
- Set pressure value for 4mA output [A □4] and pressure value for 20mA output [A □4].

 [A □4] setting range: 0% F.S.≤ [A □4]≤100% F.S.

 [A □4] setting range: 0% F.S.≤ [A □4]≤100% F.S. or

 [A □4]+10% F.S.≤ [A □4]≤100% F.S.

O Auto Shift/Remote Zero/Hold input

**only for NPN or PNP open collector output+ analog output or external input type

Auto Shift [5HFE], Remote Zero [ZER□]

When reference pressure of the pressure sensor changes, apply auto shift or remote zero digital input. It corrects present pressure to reference pressure and by moving detection level as much as fluctuation level. In case of remote zero, it is the same function as auto shift but remote zero makes the measured pressure as 0 forcibly. When changing analog output and external input setting, auto shift correction value [5HJ N], remote zero correction value [ZEJ N] are also reset as 0.

- · Setting correction value
 - : Press the ☑, ☒ key to set SV manually or apply 0VDC to orange cable over 1ms.

When selecting analog output/external input [$I \neq a$] of parameter 1 group as [SHFE] or [ZERa], press the M key to select control output at [SHaE], [ZEaE] to be with correction value.

- · Deleting correction value

• Hold [Hold]

The function to hold PV and control output while signal is input.

Output mode change

OUT1 operation mode

There are 4 kinds of control output mode in order to realize the various pressure detection.

- Hysteresis mode [ผษร.ศ]
- : When needed to change hysteresis for detecting pressure.
- Window comparison output mode [⋈ । N]
- : When needed to detect pressure in certain area.
- Automatic sensitivity setting mode [AUE o]
- : When needed to set detection sensitivity automatically at proper position.
- Forced output control mode [F.a Ut]
- : When needed to display pressure with remaining comparison output OFF regardless of setting value.

OUT2 operation mode

Select control output mode between two types or ${}_{\sigma}FF$. In case of OUT1 operation mode, select automatic sensitivity setting mode [RUE_{σ}] or forced output control mode [$F.\sigma UE$]. OUT2 operation mode setting is inactive.

- Hysteresis mode [HY5.M]
- : When needed to change hysteresis for detecting pressure.
- Window comparison output mode [$\ensuremath{\mathbb{W}}$! $\ensuremath{\mathbb{N}}$]
- : When needed to detect pressure in certain area.
- OFF [off]

F-14

Pressure Sensor

© Control output change

Type of control output for OUT1 and OUT2 can be able to set Normally Open or Normally Closed.

Note that Normally Open and Normally Closed provide opposite output.

SV	OUT1 output	OUT2 output
No	Normally Open	OFF
NE	Normally Closed	OFF
1020	Normally Open	Normally Open
1020	Normally Open	Normally Closed
1020	Normally Closed	Normally Open
10.50	Normally Closed	Normally Closed

Response time (chattering prevention)

It can prevent control output from chattering by changing response time.

There are 10 types of response time; 2.5ms, 5ms, 10ms, 25ms, 50ms, 100ms, 250ms, 500ms, 1,000ms, 5,000ms. If the response time is getting longer, the detection will be more stable by increasing the number of digital filter.

O PV display color and color linked output

You can select PV display color to the linked output status. There are 4 types as below.

Select color linked output among [alle 1], [alle 2], or [ALL].

sv	PV display color
	Green in normal status. When the set color linked output turns ON, it displays red.
	Red in normal status. When the set color linked output turns ON, it displays green.
REd	Red is fixed.
GREN	Green is fixed.

O Pressure unit change

PSQ series has 8 kinds of pressure unit. Please select the proper unit for application.

• kPa, Mpa, kgf/cm², bar, psi, mmHg, inHg, mmH₂O %When using mmH₂O unit, multiply display value by 100.

Select the display type at the SV display part in RUN mode. There are 3 types; displaying SV [5 \pm a], displaying unit [UNI \pm], none [\pm FF]

© RESET

This function is to reset all parameters as factory default except control ouptut SV to prevent wrong settings or difficult operation.

O Password

This function is to limit parameter settings, to check the parameter or to change the parameter settings only for entering the set password.

• 0000: Password function OFF

· 0001: Only checking parameters

Setting range: 0002 to 9999

Ocontrol output change

Select between NPN open collector output or PNP open collector output.

Key lock

The key lock function prevents key operations so that conditions set in each mode.

- Press the M+
 \(\mathbb{M} \) key over 1 sec in RUN mode to lock keys. The PV display part displays [L \(\omega \) \(\mathbb{L} \) \(\mathbb{M} \), and the SV display part displays [\(\omega \) \(\mathbb{N} \)] for 1 sec and it returns in RUN mode.
- Press the M+ key over 1 sec in RUN mode to unlock keys. The PV display part displays [L□[K], and the SV display part displays [□FF] for 1 sec and it returns in RUN mode.

O Zero-point adjustment

The zero-point adjustment function forcibly sets the pressure value to "zero" when the pressure port is opened to atmospheric pressure. When the zero adjustment is applied, analog output [Voltage or Current] is changed by this function.

To set zero atmospheric pressure forcibly, press the $\boxdot+$ keys over 1 sec in RUN mode with the opened pressure port.

High/Low Peak Hold

This function is to diagnose malfunction of the system caused by parasitic pressure through memorizing input the max./min. pressure occurred from the system.

Press the $\mathbb{M}+\mathbb{A}$ key more than 1 sec in RUN mode and set the Peak Hold.

© Error and troubleshooting

Diaplay	Cause	Troubleshooting

Autonics E-15

PSQ Series

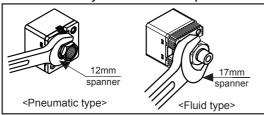

Installation

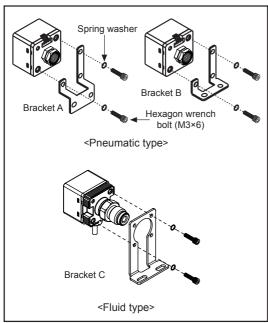

- Pressure port is divided as standard and option specification. Therefore, make sure use commercially available one touch fitting.
 - Pneumatic type: Rc1/8, R1/8, NPT1/8
 - Fluid type: Rc1/8, R1/8, R1/4, NPT1/4, 9/16-18UNF
- Use a spanner (pneumatic type: 12mm, fluid type: 17mm) at the metal part of the unit in order not to overload on the body when connecting one touch fitting.
- Two different brackets are provided for pneumatic type and one different brackets are provided for fluid type.
 Select proper one with considering your application environments
- At first, please unscrew hexagon wrench bolt and assemble the bracket on this unit by fixing hexagon the wrench bolt

In this case, tightening torque of hexagon wrench should be max. 3N·m. It may cause mechanical problems.

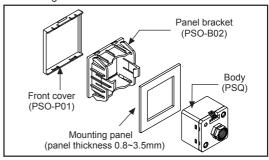

⚠ Caution

The tightening torque of one touch fitting should be max. 10N·m. It may cause mechanical problems.

 PSQ Series' has panel bracket (PSO-B02), front cover (PSO-P01) are sold separately. When mounting the unit on panel, please follow the below figure.

Proper Usage

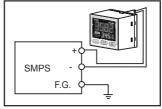

⚠ Caution

PSQ Series is for sensing of non corrosive gas. Do not use this product at corrosive gas or flammable gas, etc.

- 12-24VDC model, power supply should be insulated and limited voltage/current or Class 2, SELV power supply device.
- Do not insert any sharp or pointed object into pressure port. Failure to follow these instructions may result in malfunction and damage to the sensor.
- Be sure that this unit must avoid direct touch with water, oil, thinner, etc.

- Do not use the product in preparation time (within 3 sec). for operationg after power-on.
- When using switching mode power supply, frame ground (F.G.) terminal of power supply should be grounded.

- · Avoid wiring with power line or high voltage line. It may cause malfunction by noise.
- When moving this unit from cold place to warm place, please remove the humidity on the cover.
- Do not press the setting button with sharp or pointed object
- Do not apply a tensile strength in excess of 30N to the cables or connector.
- · This unit may be used in the following environment.
- 1 Indoors
- ② Altitude max. 2,000m
- 3 Pollution degree 3
- ④ Installation category II

F-16
