

Laser Presenter | Wireless | USB mini dongle | Black

General information

This wireless laser pointer and slideshow controller can really bring your presentations to life. Simply connect the laser controller to your PC (using the USB dongle provided) and you can walk around while presenting, rather than being forced to stay close to your PC. With this essential presentation device, you have the freedom to control your slides remotely – to a distance of 30 metres – using the eight buttons on the pointer. The pointer itself helps you draw your audience's attention to specific parts of your presentation screen: simply point its red beam at the area you wish to highlight (effective to a distance of 100 metres) and you no longer have to describe each slide. Its ultra-portable design makes it easy to take with you wherever you may be presenting.

Features

- Wireless laser pointer and slideshow controller – with USB 2.0 dongle for connection
- Eight buttons – offer control of your presentation up to 30 metres away
- Powerful red laser – can highlight specific areas up to 100 metres away
- Small and ultra-portable – for ease of carrying with you
- Requires 2x AAA batteries (not included)
