

Car Park Assist | 3 Distance Settings | Extractable Light | Low Battery Alert

General information

Avoid bumping into objects as you park with this easy-to-fit Park Assist device.

Suitable for fitting to any wall, post or other object, this Park Assist device can simply be screwed into place or attached with adhesive. It is completely adjustable to alert you when your car is within 30, 60 or 90 centimetres of it. On just one set of batteries (4x AA, not included) you can use this invaluable parking aid for up to a year, and a handy low battery alert notifies you should your batteries need replacing.

When your car comes close to your chosen warning distance a light - that you can place in easy sight on your dashboard - will be lit. A green light tells you when you are 150 cm away. This turns orange when getting closer, and becomes red when you reach your preferred distance of 30, 60 or 90 cm.

The device uses ultrasonic 40 KHz technology for the highest accuracy of distance detection and the lowest power usage.

Features

- Simple to install - with screws or adhesive
- Adjustable parking distance settings - of 30, 60 or 90 cm
- Low power usage - a single set of 4x AA batteries (not included) will last about one year on average
- Battery alert - so you know when you need to replace your batteries
- High accuracy distance detection - using 40 KHz technology
- Traffic light warning system - green, orange and red lights alert you when you are coming close to your set parking distance

Specifications
