

Air Purifier | 20 m2 | 35 Watt

General information

Nothing beats living or working in a clean home or office. However, even when a room looks spot on, the air quality might not be as good; dust and dirt particles floating through the air can be so small that you can't actually see them. Our Nedis® air purifier offers the perfect solution for a healthy indoor climate.

This air purifier works with a HEPA filter, removing up to 99.99% of all particles of 0.3 micrometre or bigger, which includes pollen and dust mite. This means less dust and you will also suffer much less from your allergies. To maximise the effect, the air purifier also integrates an ionisator. This option ensures that dirt and dust particles fall to the floor instead of floating freely through the air that you breathe so you and your family can enjoy extra clean air while being indoors.

The air purifier has a mood light and blue-lit touch buttons for clear visibility.

The fan has 3 speeds plus a night mode. The latter ensures clean, pure air even while you're asleep but at an even lower noise level and with the lights out. This makes this air purifier perfect for your bedroom, baby room or basically any room up till 20 m2.

Features

- Touch control panel with blue-lit buttons - clearly visible and easy to operate
- 3-level fan speed
- Quiet night mode - for a good night's rest in clear air
- Works with HEPA filter - removes 99.99% of all dust and dirt particles $\geq 0.3 \mu\text{m}$
