4. POSITIONING - CONNECTION (continued)

Positioning in a row:

. The product profile and positioning of the terminals allow single-phase and three-phase toothed connection supply busbars to be passed at the top of the product without impairing accessibility of the contactor terminals. This way it is possible to select the position of the pulse operated latching relay freely in the row and to connect the circuit breakers located on the same rail via a supply busbar.

Examples of wiring diagrams:

. "2 NO" contactor

. "4 NO" contactor
