## Notes:

Unless otherwise stated, all parameters are specified at 230 VAC input voltage, 50 Hz , ambient temperature $25^{\circ} \mathrm{C}$ and relative humidity $70 \%$ for rated load output. The values of parameters related to the output voltage regulation is measured from low to high line or for load changes from 0 to $100 \%$, respectively. The power supply is considered as an independent unit, but the final equipment still need to reconfirm that the whole system complies with the EMC directives. If the PSU is installed in the final device as a subassembly, the tests should be repeated to verify that the system has been met compliance. Detailed technical data are available on request.
